Simon Morris

Computer Science Student | Aspiring Software Engineer

morris.n.simon@gmail.com 901-216-2929

EDUCATION

University of Tennessee Knoxville

Bachelor of Science in Computer Science | Sophomore

GPA: 3.13

Expected graduation: 2029

Current coursework: Data Structures, Computer Organization

EXPERIENCE

Oven Runner | Memphis Pizza Cafe

June 2023–Present

- Coordinated communication among kitchen staff, servers, managers, and customers to keep service moving.
- Corrected kitchen and server order errors while maintaining a positive customer experience.
- Tracked order progress and handoffs to support timely delivery.
- Managed priorities during shifts with about $4,000 in sales on an average night and up to $9,000 on busy nights.

Kitchen Staff | Mellow Mushroom

February 2026–Present

- Balanced multiple tasks and priorities in a fast-paced kitchen.
- Used time management and multitasking to support an organized service flow.
- Corrected mistakes promptly while staying composed and focused under pressure.

PROJECTS

Sensor-Controlled Light Sculpture | Arduino, C++

- Designed and assembled a breadboard circuit for an interactive light sculpture.
- Programmed an Arduino in C++ to vary light-flicker speed based on distance-sensor readings from a nearby object or hand.

Personal Portfolio Website | HTML, CSS, AI-Assisted Development

- Maintain a personal website with profile and resume pages using HTML and CSS.
- Review and test AI-assisted code updates while developing foundational knowledge of web development.

Browser Homepage Data Dashboard | JavaScript, HTML, CSS, Google Health API, Google Cloud Platform

- Developed a browser homepage that displays weather and wearable tracker data in an easy-to-read format.
- Used the Google Health API and Google Cloud Platform hosting to access collected data from anywhere.
- Used AI assistance while working with JavaScript to communicate with the Google Health API, parse data, and present it clearly.
- Built foundational knowledge of the JavaScript code and the data flow between the API and the homepage.

SKILLS

Programming: C++

Web technologies: HTML, CSS, JavaScript

APIs and cloud: Google Health API, Google Cloud Platform

Development tools: Git, VS Code, GitHub Copilot

Development environment: Linux

Professional: Time management, multitasking, customer service, problem solving, working under pressure

ACTIVITIES

volHack

Software-focused club centered on developer community, collaboration, hackathons, and workshops.

SUMMARY

Computer Science sophomore (GPA 3.13) focused on C++ and practical software development, with experience in customer service, time management, and problem-solving under pressure.
